In anatomy, a process (Latin: processus) is a projection or outgrowth of tissue from a larger body. For instance, in a vertebra, a process may serve for muscle attachment and leverage (as in the case of the transverse and spinous processes), or to fit (forming a synovial joint), with another vertebra (as in the case of the articular processes).

Basic Anatomy, Dorsal (Sensory) Roots. The cell bodies of sensory neurons of spinal nerves are located in the dorsal root ganglia. [3, 4, 5] Each dorsal root contains the input from all the structures within the distribution of its corresponding body segment (ie, somite). Dermatomal maps portray sensory distributions for each level. These maps differ somewhat according to the methods used in ...

Extensor pollicis longus originates from the middle third of the posterior surface of ulna, mostly along its radial border. This attachment extends onto the adjacent interosseous membrane, and is situated proximal to the origin of extensor indicis muscle. From here, the muscle belly runs obliquely in a radial direction, towards the lateral aspect of the wrist joint.
